

Early Years Education System

WORKING TOGETHER TO MAKE THE BASE STRONG

NEWSLETTER - March

Early Years Education System is not only a Daycare, but a complete child development program. Through this unique educational program, we are committed to make your child's base strong. We strive to achieve this by enhancing basic learning skills and capabilities of each of our children

Tip of the Month

INDEPENDENCE ISN'T "DOING YOUR OWN THING", IT'S DOING WHAT'S RIGHT ON YOUR OWN.

UNLESS YOU MEAN WHAT YOU SAY, CHILDREN WILL TEST WHAT YOU SAY.

Kid Bits

Dr. Palmer's Exercise Recommendations.
Dr. L. Palmer recommends a regular sequence of physical activities which includes:

- Log rolls
- Ball catch
- Forward rolls
- Helicopter spins
- Hanging upside down

He also states that the slow, controlled movements of Tai Chi are very effective in developing body control.

Your child will grow up in the 21st century, a world that will reward the ability to adapt quickly, to think logically, and to be innovative. Yet, despite society's constant emphasis on the technological rather than the social, it will still be a world where kindnesses, honesty, respect for others, cooperation, and the ability to form close, loving relationship will be at the heart of true happiness.

The foundations of their education, and the habits that they forms, make the difference between their future success and failure. It is important to provide them with a rich, stimulating environment during the first six years of life.

TURNING POTENTIAL INTO ACTUAL INTELLIGENCE

You will sometimes hear the argument that pre-school children should not, for example, learn to read; they should be joyfully exploring nature. This misses the point-they can do both. Children need a whole range of activities to bring out their potential.

Brain building: your child is born with more than enough brain cells to be highly successful. More than 100 billion! It's not the number of brain cells that determines usable intelligence, it's the number of connections that are made between those brain cells. These connections are formed by the experiences and thoughts that you give to your child through the rich, stimulating environment you provide in the early years.

That environment is made up of games, visits, conversations, experiences, activities, and loving attention.

Keep it fun! Over ambitious parents fail because, instead of support and encouragement, they provide a hot-house environment and pressure. The unshakable rule is: if your child is not enjoying it, stop immediately. It is also vital to recognize that each child develops at his own pace. Albert Einstein started talking very late and he failed mathematics early in high school. Yet, of course, he went on to become the greatest scientist of his age. Winston Churchill initially talked with a stutter and a lisp. Yet he became one of the 20th century's greatest leaders. **Give your child a chance.**

Our Motto – **"EDUCATION & DISCIPLINE WITH LOVE AND CARE"**
